

Course Managing Suppliers Quality

Digital transformation is changing the old paradigms and ways of managing suppliers. New collaborative models are disrupting and changing entire supply chains. Quality of supplier is becoming more important than the costs of provided services. What matters is the ability to actively innovate, collaborative style of relationship, where customer and supplier are working on mutual benefits.

Course length: 1 day including an exam for certification.

Price: 480 EUR 390 GBP 580 USD including the certification exam, VAT excl.

Registration: [registration form](#)

Dates and places: View the course calendar on our web page

Overview: This course presents a managerial level overview of the latest development in collaborative models and its impacts on the management of suppliers. Long-time used models based on Service levels definitions and regular reporting is now extended by new approaches, where the quality of suppliers is analysed from opportunities created, new capabilities and innovations provided to the organization. Digital transformation projects are changing existing models, disrupting “this is how we do it for years”. Digital transformation has implications also to the ways, how organizations have to re-assess their actual IT suppliers into new ecosystems of collaborative networks, where the role of the supplier is moving from passive role (Request and control) to the proactive, ever-improving model Innovate and analyse. SFIA skill codes: Supplier Management SUPP 4-7, IT Contract management ITCM 4-6.

Prerequisites: No pre-requisites, possessing an overview of traditional service delivery models is suitable, however, the course is providing a quick recap of frequently used models before the new body of knowledge is presented to the delegates.

Target group: For the IT manager, contract managers, team leaders, IT professionals with a focus on quality management.

Course learning objectives: This course is aiming to extend course participants knowledge of existing models with growing fields of new, innovative ways how actively collaborate with a range of suppliers, how to evaluate the quality of suppliers and how to create mutual advantage through collaborative models. Key parts of the course are based on the IT Quality Index book and principles, plus selected parts of new norm ISO 44001:2018, and new models of collaborative networks.

Course agenda – 1-day format:

- IT Suppliers – key concepts of service provider and customer, ITSM logic
- Quality as defined in ISO/IEC 9001, 20000, application to IT suppliers management, SLM, Service Catalogue
- Managing suppliers - IT Quality Index dimensions S4, P3
- Mapping to COBIT 2019, APO 10 Managed Vendors, APO 09 Managed Service Agreements
- Traditional model – Request and control approach
- New collaborative management models – collaborative networks, key parts of ISO 44001
- Categorization of suppliers – adding a new quality category to suppliers categorization
- Innovate and analyse – testing new ideas, accepting the uncertainty of results.
- Maintaining ecosystems of suppliers – large, medium, small
- Role of SME, startups as a source of innovations and support for digital transformation
- Contract conditions as a source of stagnation or continual improvements and innovations
- Certification exam

Additional information:

- The course is led by an experienced Accredited IT Quality Expert. The course is building on IT Quality Index practices.
- The course provides practical guidance on how to innovate relationships with suppliers in the era of digital transformation.

CIO: Our organization used to apply very rigid and slow moving process of working with suppliers, enormous effort on our side and supplier side had to be invested to start contract, model designed in 90ties. As the speed of change is growing so fast, we managed to modify suppliers management rules and policies to enable working with smaller SME, even startups with untested solutions. Our suppliers management practices are now supporting all range of partners, where we categorize suppliers not just by price but also through quality criteria and opportunities created.
